HIGH TEMPERATURE CERAMIC COATING

LONG LASTING SPATTER PROTECTION

Zero Spat™ PTS is a heavy duty, high temperature resistant anti-spatter in aerosol form, designed for MIG/MAG welding and laser/plasma cutting tools and equipment

Use Protecta Shield as a silicone-free non-flammable protective coating to eliminate the need for chiseling and grinding after welding

PTS Protecta Shield forms a dry white film that prevents weld spatter from sticking to nozzles, equipment, fixtures, and metal surfaces

Using PTS ensures that spatter and residue can be easily wiped or brushed away after welding is completed

Protecta Shield's robust formulation lasts between 6 to 8 hours

FEATURES AND

- ▶ Fast Drying
- ▶ Long lasting
- ▶ Aust Made
- ▶ Silicone-free spray
- ▶ Good adhesion
- ▶ No oil residues
- ▶ Non-flammable
- ▶ Improves productivity
- ▶ Easy cleanup
